

FORGE PORTAL

Vendor & supplier quality, unified.

Prepared for **Cy Sack**
Head of ArsenalOS
by **Tristan Rubadeau**

Supplier quality today lives in email threads, shared drives, and systems that don't talk to each other — findings, CAPA/SCARs, certifications, and the relationship itself. **Forge Portal puts the whole vendor record in one place**, with real ISO 9001 quality workflows underneath it and a live channel to the supplier on top. This isn't a slide deck — it's a working interactive prototype.

LIVE PROTOTYPE · VENDOR PROFILE

WHAT IT DOES

01 VENDOR 360 SAM UEI, CAGE code, address, certs, contracts, contacts, and order history — one record instead of four systems.	02 ISO 9001-NATIVE QUALITY Real CAPA/SCAR lifecycle — Issued → Containment → Root Cause → Corrective Action → VOE → Closed — not a flat findings list.	03 PROACTIVE COMPLIANCE ITAR, CMMC, AS9100 tracked with live countdowns. Expiring certs surface before they lapse, with a one-click request.
04 LIVE VENDOR CHANNEL Slack-style chat per supplier, blending conversation and system events — replacing scattered email threads.	05 PROGRAM ROLLUPS Escape rate, DPPM, cost of quality, supplier response time — computed from the same records, not a side spreadsheet.	06 SUPPLIER SELF-SERVICE A slimmed vendor-facing portal: flagged issues, tracking updates, document requests — no purchasing email required.

QUALITY METRIC TRACKED DPPM	SCAR LIFECYCLE STAGES 6	CERTIFICATIONS MONITORED ITAR · CMMC · AS9100	SYSTEMS IT REPLACES Email + 4 tools
